**Connecting people, products
and ideas**

**Your supplier of functional and
decorative overlay, expertise
and know-how**

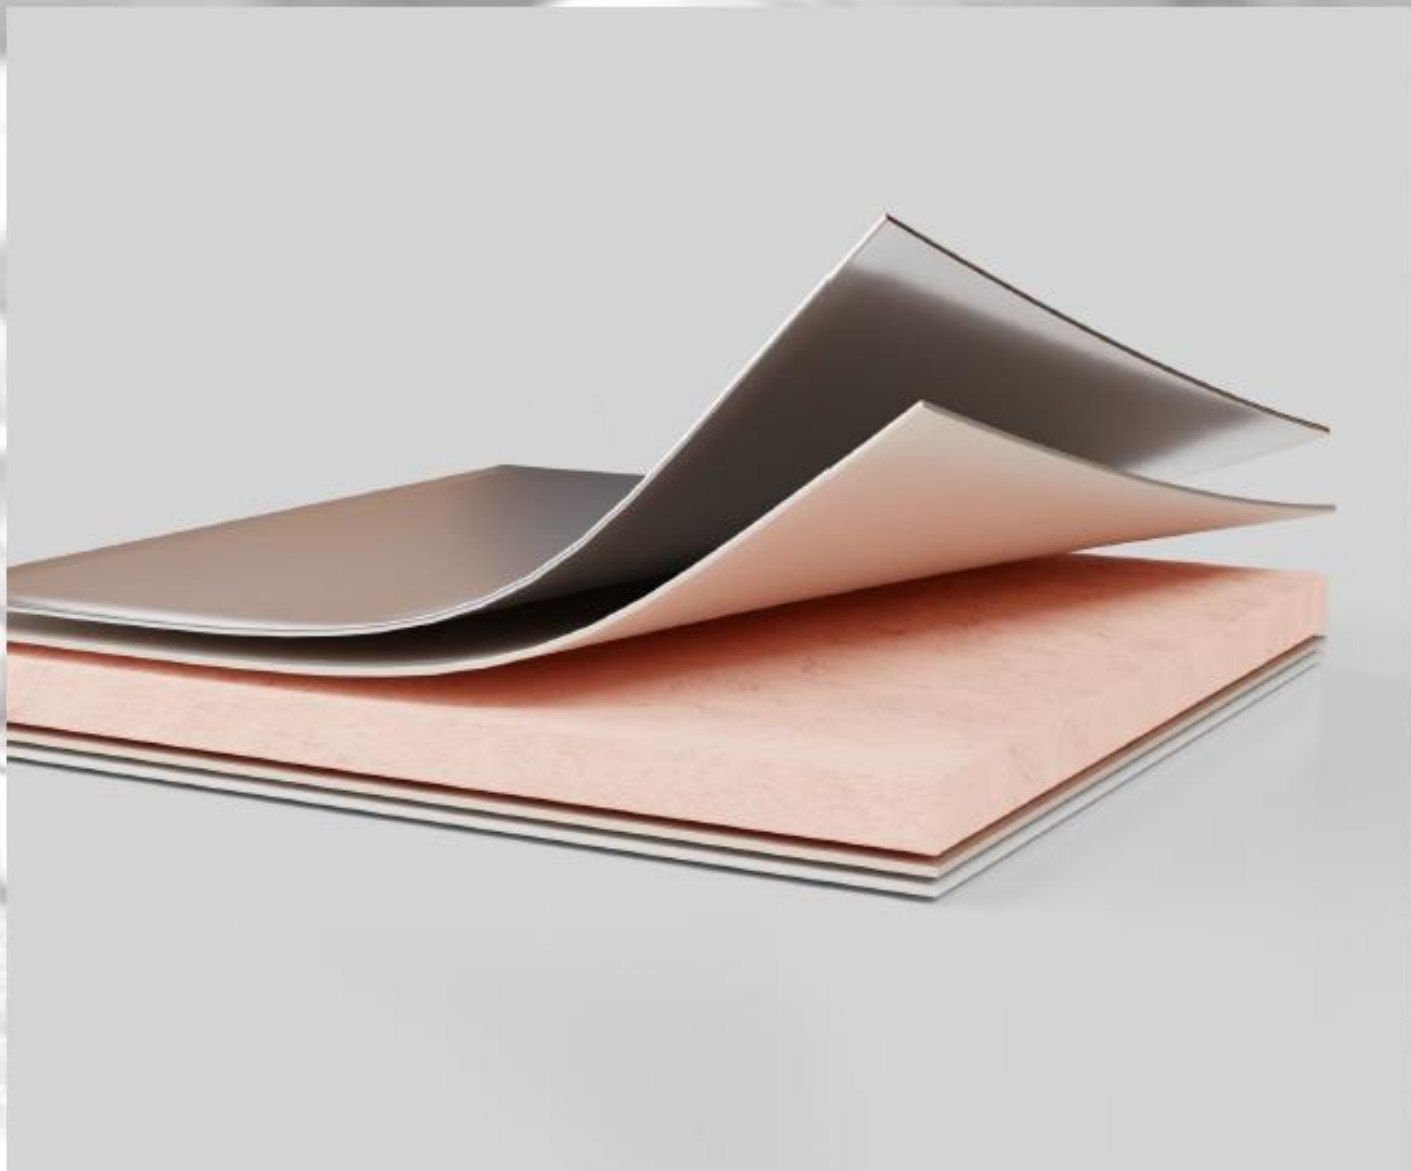

TLL – THIN LAYER LAMINATE

The people of Holz.Bau.Beratung created with TLL a new dimension of overlays. Decorative paper, individually printed, fused together with a high performing technical surface on a robust but flexible support, TLL becomes your choice for cold lamination when you have high demanding applications. TLL comes in two different surface categories:

- performance : high scratch and wear resistance, for exterior use
- sense: anti fingerprint, matte surface for interior use

We have a choice of decors available and offer also individual digital printing of decors. TLL comes in rolls or sheets as per your convenience.

Discover the new world of lamination with TLL

BTL – BLACK TEXTURED LAMINATE

Holz.Bau.Beratung offers you new possibilities for PSF overlaying. BTL is a high performance PSF film fused on a robust but flexible support, textured with different patterns for your technical and decorative projects. BTL is cold laminatable on any panel support like plywood, particleboard or MDF to form a product for decorative or technical use. BTL comes in different textures as nitro, wire or wood. Round and Hexa patterns are under development. BTL comes in rolls and sheets as per your convenience.

Step into a new PSF experience with BTL

ECO SF

Holz.Bau.Beratung is able to offer you a surface film based on an innovative non-phenolic technology. ECO SF combines the wide range usability and the easy application of a PSF with an answer to the rising demand for NAF and non-phenolic products. It is easy to apply in hot and pressure lamination onto plywood and other wood support, ECO SF offers you the ideal surface film product in addition to your bio-bond panel products. ECO SF comes in rolls and sheets as per your convenience.

POLYBAK by RICHWOOD

Holz.Bau.Beratung offers exclusively the great product range from PolyBak in Europe. PolyBak is a polymer impregnated Kraft liner board and is unique in the backer and overlay market due to its moisture resistance, strength, flexibility and extensive variety of products offered. Unlike competing paper backers, PolyBak is not brittle, allowing it to be rolled and bent without breaking. PolyBak is used as balancing paper, as crossband and veneer replacement and as MDO for different supports. PolyBak is paintable and based on NAF technology. It comes in different weights and sizes.
